Reviews

This created ebook is wonderful. I could possibly comprehended everything out of this created e ebook. Its been designed in an remarkably easy way and is particularly just after i finished reading through this ebook by which basically modified me, affect the way i believe.
(Verner Langworth III)

CARACTERIZACIÓN DEL SEDIMENTO MARINO DEL PNSAV

EAE Apr 2016, 2016. Taschenbuch. Book Condition: Neu. 220x150x4 mm. This item is printed on demand - Print on Demand Neuware - El Parque Nacional Sistema Arrecifal Veracruzano (PNSAV) comprende 28 arrecifes, la extensión es de 65,516 ha. divididos geográficamente en dos áreas: norte y sur, que sirven como hábitat y fuente de dispersión de distintas especies arrecifales de importancia ecológica, así como otras que son capturadas por ser un recurso de interés comercial. Los arrecifes que conforman al PNSAV sirven de protección a las ciudades de Veracruz, Boca del Río y Antón Lizardo de los embates del oleaje y de los fenómenos naturales como son los huracanes y vientos del norte; por su cercanía a la costa, el PNSAV está sujeto a impactos derivados de actividades antropogénicas, además de las descargas de los ríos que acarrearán sedimentos provenientes del Papaloapan al sur, Jamapa en el centro y La Antigua en la porción norte. por lo que la caracterización del sedimento es de gran relevancia en las investigaciones geoquímicas, ya que puede ayudar a conocer las concentraciones de diferentes contaminantes en cada zona. 60 pp. Spanisch.
