As a result the investigation herein reported concerned itself chiefly with a study of some of the factors that have been reported as influencing the water content of butter. The melting point and keeping quality have received attention only as a secondary matter. Plan of Investigation.--In the first twelve experiments, a can of cream was equally divided between two 10 gallon churns, one lot in each experiment being churned and worked in a normal manner; the other being treated as described in the text which follows. The working was done on a Mason butter worker, each lot of butter receiving the same number of revolutions of the worker. In all of the remaining experiments the cream was churned in an A 2 Victor combined churn and worker. The butter was worked uniformly four minutes, except in special...
