

An Inaugural Dissertation, Containing Some Observations on the Pelyvis of the Mammalia, Which, Under the Presidency of Autenreith, Professor of Anatomy and Surgery, Was Offered for Public Examination by John Fischer: A Candidate

By Johann Heinrich Ferdinand Autenreith

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from An Inaugural Dissertation, Containing Some Observations on the Pelvis of the Mammalia, Which, Under the Presidency of Autenreith, Professor of Anatomy and Surgery, Was Offered for Public Examination by John Fischer: A Candidate for the Degree of Doctor of Medicine Tubingen, September, 1798 This is the reason chiefly why the larger os ilium of the mammalia is so much narrower than the same bone in man, and its crest especially narrow. Hence the greatest distinction arises in the ratio of the muscles of the pelvis and trunk; for instance, the dorsal muscles are very large in the rabbit, and the quadratus lumborum and psoas muscles of that animal which lie anteriorly on the longest transverse processes. These muscles, on both sides, completely hide the anterior aspect of the bodies of the lumbar vertebrae. There is no iliacus muscle, as there is evidently no room for it; but the quadratus lumborum being left on the lateral and superior margin of the pelvis, it ascends above that, resting almost on the anterior and lateral margin of the...
