## Motion Study; A Method for Increasing the Efficiency of the Workman

---

By Frank Bunker Gilbreth

Theclassics.Us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1911 edition. Excerpt: .amount of skill required; those that chiefly require skill should be handled by mechanics, and those that chiefly require strength, endurance, and speed should be handled by specially trained laborers. This is the only way to enable brickwork to compete with concrete, when all of the architects, engineers, owners, and contractors shall have learned the full possibilities of concrete. It will be urged that such division of the work of bricklaying will lower the general skill of the bricklayers as a class. Far from it! All operations requiring skill will remain in the hands of the bricklayer, who, escaping all work that unskilled hands could do, will have the more time and energy to devote to the art element of his work. But we are not at this time discussing brickwork as a lost art --we cite bricklaying here as an example of the...
