## SHORT DISCOURSES, FOR THE USE OF FAMILIES

To read **Short Discourses, for the Use of Families** PDF, you should follow the web link listed below and save the document or gain access to other information which are in conjunction with SHORT DISCOURSES, FOR THE USE OF FAMILIES book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 108 pages. Original publisher: Washington, D. C. : National Aeronautics and Space Administration, Office of Management, Scientific and Technical Information Division ; Springfield, Va. : For sale by the National Technical Information Service, 1990. OCLC Number: (OCoLC)34371010 Subject: Rotors (Helicopters) -- Aerodynamics -- Computer simulation. Excerpt: . . . From a given set of collocation point locations for each filament the local tangent, normal, and binormal vectors at each collocation point are determined. These vectors are derived from helical arcs passed through each set of three points. As mentioned, the desired solution is reached when the total velocity vector is tangent to the wake curve at every blade collocation point, the tip point. This total velocity vector at any point includes the local self-induction effect (SIVE), the contributions from the rest of the wake (BCand), and the velocity induced by the bound circulation on the rotor blades, the swirl velocity component associated with the rotating coordinate system. Local normal and binormal vectors can be used to define a crossflow at each collocation point, as shown in Figure 3. If the total velocity at a point has a component in its crossflow plane, then the solution cannot be steady, since the vortex filament would then be convected in the crossflow plane. The description of the wake in a rotating frame, with vortex displacement being described in local crossflow planes, differs significantly from the usual purely Lagrangian description of the collocation point locations in a stationary frame. It is useful to think of the calculation as taking place in curvilinear coordinates defined by the instantaneous wake shape. The locations of the collocation points form a computational mesh along the vortex filament, and thus the wake description is essentially Eulerian along the axial length. Only the...
