

Multifunctional Nanocomposites for Energy and Environmental Applications

Filesize: 9.24 MB

Reviews

The publication is simple in go through preferable to fully grasp. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.
(Mrs. Josiane Collins)

MULTIFUNCTIONAL NANOCOMPOSITES FOR ENERGY AND ENVIRONMENTAL APPLICATIONS

[DOWNLOAD PDF](#)

Condition: New. Publisher/Verlag: Wiley-VCH | Focusing on real applications of nanocomposites and nanotechnologies for sustainable development, this book shows how nanocomposites can help to solve energy and environmental problems, including a broad overview of energy-related applications and a unique selection of environmental topics. Clearly structured, the first part covers such energy-related applications as lithium ion batteries, solar cells, catalysis, thermoelectric waste heat harvesting and water splitting, while the second part provides unique perspectives on environmental fields, including nuclear waste management and carbon dioxide capture and storage. The result is a successful combination of fundamentals for newcomers to the field and the latest results for experienced scientists, engineers, and industry researchers. | Chapter 1: Introduction Chapter 2: Advanced Nanocomposites Electrodes for Lithium Ion Batteries Chapter 3: Carbon Nanocomposites in Electrochemical Capacitor Application Chapter 4: Application in Nanostructure Electrodes in Halide Perovskite Solar Cells and Electrochromic Devices Chapter 5: Perovskite Solar Cell Chapter 6: Nanocomposite Structures Related to Electrospun Nanofibers for Highly Efficient and Cost Effective Dye Sensitize Chapter 7: Laser Ablation Based Techniques for Solution-phase Synthesis Chapter 8: Thermoelectric Nano Composite for Energy Harvesting Chapter 9: Graphene Composite Catalysts for Electrochemical Energy Conversion Chapter 10: Electrochromic Materials and Devices Fundamentals and Nanostructuring Approaches Chapter 11: Nanocomposite Photocatalysts for Solar Fuel Production from CO₂ and Water Chapter 12: The Application of Nanocomposite Catalysts in Biofuels Production Chapter 13: Photocatalytic Nanomaterials for Energy and Environment Chapter 14: Role of Interfaces at the Nano-architected Photocatalysts for Hydrogen Production from Water Splitting Chapter 15: Nanostructures Catalysts for Small Molecule Conversion Chapter 16: Rational Heterostructure Design for Photo Electrochemical Water Splitting Chapter 17: Layered Doubled Hydroxides Derived NO_x Storage Reduction Catalyst for Vehicle NO_x Emission Control Chapter 18: Applications of Nanomaterial in Nuclear Waste Management Chapter 19: Electromagnetic Interference Shielding Chapter 20: Mussel-inspired Nanocomposites Synthesis and Promising Applications in Environmental Fields | Format: Hardback | Language/Sprache: english | 1648 gr | 252x177x40 mm | 704 pp.
