Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from High School Chemistry, Consisting of Directions for Performing a Series of Experiments: With Test Questions on the Experiments, and Simple Problems for Investigation A knowledge of chemistry is acquired by - 1. By experiment; 2. By accurate observation of the phenomena revealed by experiment, and by systematically recording these observations as they occur; 3. By reasoning based upon our observations; 4. By investigation; that is, by originating new processes or employing those with which the student is already familiar, and applying them to the solution of new problems; 5. By a knowledge of chemical theory, which is itself based upon a knowledge of the facts of chemistry, and becomes in its turn an aid in making further progress in the science. All these means of acquiring a knowledge of chemistry have been steadily kept in view in the preparation of this manual. I have long held the opinion that a textbook for beginners in chemistry should consist mainly of directions for performing a series of experiments. These experiments should be so graded and arranged that all the prominent facts and principles of the science could be re-discovered, as it were, by any intelligent pupil who performed the experiments and reasoned upon the phenomena they presented. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
