

Nonverbal Reactions to Wound Malodor

By Baker, Gloria

Condition: New. Publisher/Verlag: Scholar's Press | Nurse educators use high fidelity simulation to expose nursing students to various wound characteristics. To facilitate students developing skills in managing malodor, nurse educators have designed simulations including olfactory realism. However, little is known about how nursing students react to malodor in simulation. This book reports an observational study using qualitative descriptive methodology to document nursing students nonverbal reactions to malodor in simulation. A coding scheme using the Facial Action Coding System (FACS) was drawn from the literature and revised with nonverbal behavior codes which emerged during data analysis. Content analysis of participants nonverbal reactions to malodor revealed three themes of reactions: Noticing, Confirming, and Focusing. Additionally, nonverbal reactions embedded in the three themes seemed to cluster into two patterns of behaviors: physical reactions and psychosocial reactions. | Format: Paperback | Language/Sprache: english | 120 pp.

Reviews

This publication is amazing. This can be for all who statte that there had not been a worth reading through. I realized this publication from my i and dad encouraged this ebook to find out.

-- **Desmond Schuster II**

Thorough guide! Its such a very good go through. It is really simplified but surprises in the 50 % from the ebook. You will like how the blogger write this ebook.
