Little can be done in the way of glasses towards correcting this form of astigmatism, though much improvement of vision sometimes occurs when stenopaic spectacles are worn, the opening being made to suit the peculiarity of each case. We now pass on to the much more common variety, which can frequently be exactly corrected by the help of piano-cylindrical lenses. Regular astigmatism is due to the curvature of the cornea being different in the two meridians, that of maximum and minimum refraction; these are called the chief meridians, and are always at right angles to each other. In the normal eye the cornea is the segment of an ellipsoid and not of a sphere, so that there is a slight difference in the refraction of the two chief meridians, the focus of the vertical meridian being slightly shorter than that of the horizontal. This can easily be proved by looking at a card on which is drawn two lines crossing each other at right angles; the card is held close to the eye and gradually made to recede; both lines cannot be seen at the same time with equal clearness, the horizontal being seen clearly at a shorter distance than the vertical line. So long, however, as the acuteness of vision is not impaired it goes by the name of normal astigmatism, or regular astigmatism of the normal eye. Parallel rays passing through a convex spherical glass come to a focus...
