

## Computational Fluid Dynamics Analysis for the Orbiter Lh2 Feedline Flowliner

Filesize: 8.63 MB

### **Reviews**

*Good e book and useful one. It really is simplistic but shocks in the 50 % of your book. Your way of life period will probably be convert the instant you total reading this ebook.*

## COMPUTATIONAL FLUID DYNAMICS ANALYSIS FOR THE ORBITER LH2 FEEDLINE FLOWLINER

To read **Computational Fluid Dynamics Analysis for the Orbiter Lh2 Feedline Flowliner** eBook, you should access the button beneath and save the file or have access to additional information which are highly relevant to COMPUTATIONAL FLUID DYNAMICS ANALYSIS FOR THE ORBITER LH2 FEEDLINE FLOWLINER ebook.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 30 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. In phase II, additional inducer rotations are simulated in order to understand the root cause of the flowliner crack problem. CFD results confirmed that there is a strong unsteady interaction between the backflow regions caused by the LPFTP inducer and secondary flow regions in the bellows cavity through the flowliner slots. It is observed that the swirl on the duct side of the downstream flowliner is stronger than on the duct side of the upstream flowliner. Due to this swirl, there are more significant unsteady flow interactions through the downstream slots than those observed in the upstream slots. Averaged values of the local velocity at the slots were provided to the NESC-ITA flow physics acoustics team to guide them in designing the acoustics experiment. A parametric study was performed to compare the flow field in the flowliner area when one upstream slot and one corresponding downstream slot were enlarged. No significant differences were observed between the flow field obtained from the enlarged slot configuration when compared with the original configuration. More cases must be analyzed with various enlarged slot configurations to generalize this observation. The flow through the A1 test stand and the flow through the orbiter fuel feedline manifold were simulated without the LPFTP. It was observed that incoming flow to the flowliner and inducer was more uniform in the A1 test stand than in the orbiter manifold. Additionally, each engine LPFTP in the orbiter receives significantly different velocity distributions. Because of the differences observed in the computed results, it is not possible for the A1 test stand to represent the three different engine feedlines simultaneously. This item ships from La Vergne, TN. Paperback.
