By Harold L. Levin, Michael S. Smith

McGraw-Hill Education - Europe, United States, 2013. Spiral bound. Book Condition: New. 10th Revised edition. 272 x 211 mm. Language: English . Brand New Book. Utilizing actual case studies and field photographs, this successful lab manual covers the full spectrum of historical geology sediments, plate tectonics, paleontology, and petrology in flexible, self-contained units. This manual has been developed for use in both non-majors and combined courses in historical geology. The exercises emphasize the principles and methods by which geologists discover the origins and changing nature of our planet. These exercises or studies will help students understand how ancient conditions can be read from rocks and fossils, how geologic forces at the surface and within the planet can alter the environment, and how events of the past can be placed within an integrated chronological sequence. The exercises are designed for students who may not intend to specialize in geology. This does not mean, however, that the treatment is superficial, nor that it cannot give adequate preparation for students pursuing an academic major in the earth sciences.
