Development of a Location Validation Web Service

By Markus Rothenhöfer

GRIN Verlag Aug 2012, 2012. Taschenbuch. Book Condition: Neu. 210x148x2 mm. This item is printed on demand - Print on Demand Neuware - Seminar paper from the year 2012 in the subject Computer Science - Internet, New Technologies, grade: 1,3, University of Münster (Wirtschaftsinformatik), course: Web Technologies Seminar, language: English, abstract: In many applications unverified data is processed, which often leads to inconsistency or errors. Therefore the need for applications to validate this data is high. A lot of types of data can be verified easily but more complex user data such as full-text-addresses pose a great challenge towards validation. This paper proposes an exemplary solution for such a validation by describing the development of a web service that allows a research conference database 1 to validate conference-location- strings. The validation consists of checking the plausibility of the location string, correction and standardization of the spelling, classification (City, State, Country, etc.) and providing corresponding data such as latitude and longitude. For this purpose, the web service accesses the GeoNames database. Consequently, the conference database receives a rich response which it can also use to provide further information, e.g., embedded maps or HTML5-Microdata- Markup. 24 pp. Englisch.
