The color coding of each mineral phase is keyed to the accompanying legend. The image field dimensions are 256 mm x 200 um. Computer model (lines) and experimental results (points) for degree of hydration of cement 151 with w/c (left) and w/c (right). Circles indicate mean values measured for specimens cured at 23 c and squares indicate mean values measured for specimens cured at 60 c. Filled symbols indicate measurements made with the normal 105 c oven, and open symbols indicate measurements made with the dry 105 c oven. Error bars on experimental data represent the range of two measurements made on two samples. The dashed curve in each plot is the model prediction for curing at 60 oc when an effective activation energy of kj/mole is used. Computer model (lines) and experimental results (points) for degree of hydration of cement 152 with w/c (left) and w/c Circles indicate measurements made on specimens cured at 23 c and squares indicate measurements made on specimens cured at 60 oc. Filled symbols indicate the mean values for samples treated in the normal 105 c oven, and open symbols indicate the mean values for samples treated in the dry 105 c oven. Error bars represent the range of two separate measurements on two samples Differential mass loss as a function of temperature for cement 151 with w/c cured at 23 c to different ages and equilibrated at 105 0c with normal atmospheric conditions (see text).
