John Wiley and Sons Ltd, United Kingdom, 2006. Mixed media product. Book Condition: New. 250 x 174 mm. Language: English . Brand New Book. This book introduces the reader to the C++ programming language and how to use it to write applications in quantitative finance (QF) and related areas. No previous knowledge of C or C++ is required. - experience with VBA, Matlab or other programming language is sufficient. The book adopts an incremental approach; starting from basic principles then moving on to advanced complex techniques and then to real-life applications in financial engineering. There are five major parts in the book: * C++ fundamentals and object-oriented thinking in QF* Advanced object-oriented features such as inheritance and polymorphism* Template programming and the Standard Template Library (STL)* An introduction to GOF design patterns and their applications in QF Applications The kinds of applications include binomial and trinomial methods, Monte Carlo simulation, advanced trees, partial differential equations and finite difference methods. This book contains a CD with all source code and many useful C++ classes that you can use in your own applications. Examples, test cases and applications are directly relevant to QF. This book is the perfect companion to Daniel J. Duffy s book Financial Instrument Pricing using C++ (Wiley 2004, 0470855096 / 9780470021620) Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.
