Reviews

This book is great. it absolutely was writtern quite properly and beneficial. Its been written in an extremely basic way and it is merely after i finished reading through this ebook in which basically changed me, affect the way i really believe.
(Leopold Schmidt)

94 ANNUAL REPORT, DIVISION OF CANCER BIOLOGY, DIAGNOSIS, AND CENTERS: OCTOBER 1, 1993-SEPTEMBER 30, 1994 (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from 94 Annual Report, Division of Cancer Biology, Diagnosis, and Centers: October 1, 1993-September 30, 1994 The diversity and high quality of each of these research programs reflects the varied interests and training of the investigators within the division. Their continued interaction and exchange of ideas and technical expertise fosters a fruitful environment for the advancement of laboratory and clinical investigations. Research conducted in the intramural laboratories covers a broad range of investigations from the regulation of gene expression in simple prokaryotic systems to clinical trials of new therapeutic agents for cancer. A common theme of many of these studies is to understand the molecular mechanisms involved in the regulation of normal cell growth and differentiation, and to define the genetic changes responsible for neoplastic transformation and for the progression of cancer from localized to metastatic disease. A strong program in basic immunology explores the complex mechanisms governing the regulation of the immune response. While the aim of these studies is to further our understanding of the principles governing immune cell function, a long-term goal is to identify those aspects of the biology of tumor cells that can be enhanced to promote their recognition and attack by the immune system, and those elements of the immune system that can be stimulated to provide a more effective antitumor response. Already, discoveries in fundamental immunology have suggested entirely new ways to control or prevent the development of cancer. During the past year, Phase I clinical trials of recombinant vaccinia virus vaccines and a peptide vaccine for human cancer were initiated. In addition, studies of the normal immune response have led to important discoveries regarding the immune dysfunction associated with the progression from...
