CYLINDROSPERMOPSIN AND SAXITOXIN BIOSYNTHESIS

Ralf Kellmann
Cylindrospermopsin and
Saxitoxin Biosynthesis
The molecular genetics of two cyanobacterial
alkaloids

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | The molecular genetics of two cyanobacterial alkaloids | The present study deals with the molecular genetics and biochemistry of two cyanobacterial toxins, cylindrospermopsin and saxitoxin. The molecular phylogenies of three putative cylindrospermopsin biosynthesis genes, encoding an amidinotransferase (aoaA), a non-ribosomal peptide synthetase (aoaB) and a polyketide synthase (aoaC) has been examined and functional modelling was carried out to gain insights into the mechanism of precursor recruitment in this pathway. An in vitro...
