

Physics Terminology (Speedy Study Guide)

Term	Definition
Absolute humidity:	The mass of water vapor in a sample of air in the volume of the sample.
Absolute zero:	The temperature of -273.15 or 0 K at which molecular motion ceases.
Absorbance:	The ratio of the total absorbed radiation to the total incident radiation.
Acceleration:	The rate of change of velocity with respect to time.
Acceleration due to gravity:	The acceleration imparted to bodies by the attractive force of the earth or any other heavenly body.
Achromatic:	capable of transmitting light without decomposing it into its constituent colors.
Acoustics:	The science of the production, transmission and effects of sound.
Aerobic shielding:	A shield barrier that prevents the transmission of atomic energy.
Alephatic:	Any change in which there is no gain or loss of heat.
Afocal lens:	A lens of zero convergent power, whose focal points are infinitely distant.
Affixes:	The fraction of the total light incident on a reflecting surface, especially a celestial body, which is reflected back in all directions.
Alpha particle:	The nucleus of a helium atom (two protons and two neutrons) emitted as radiation from a decaying heavy nucleus.
Alternating current:	The electric current that changes its direction periodically.
Amorphous:	Solids which have neither definite form nor structure.
Ampere:	S.I. Unit of electric current, one ampere is the flow of one coulomb of charge per second.
Amplitude:	The maximum absolute value attained by the disturbance of a wave or by any quantity that varies periodically.
Angle of contact:	The angle between tangents to the liquid surface and the solid surface inside the liquid, both the tangents drawn at the point of contact.
Angle of incidence:	The angle between the incident ray and the normal.
Angle of reflection:	The angle between the reflected ray and the normal.
Angle of refraction:	The angle between the refracted ray and the normal.
Angle of repose:	The angle of inclination of a plane with the horizontal such that a body placed on the plane is at the verge of sliding.
Angstrom:	A unit of length, $1 = 10^{-10}$ m.
Angular momentum:	Also called moment of momentum, it is the cross product of position vector and momentum.
Angular velocity:	The rate of change of angular displacement with time.
Annealation:	A process in which a particle and antiparticle combine and release their rest energies in other particles.
Antineutrino:	The antiparticle of neutrino. It has zero mass and spin 1/2.
Atomic mass unit:	It is equal to one twelfth the mass of $C-12$ isotope of carbon, $1 \text{ amu} = 1.66 \times 10^{-27} \text{ kg}$.
Avogadro number:	The number of particles in an atomic mole.
Bauschinger number:	The number of molecules in a gram molecular weight of a substance. It is equal to 0.02×10^{25} .
Balmer lines:	Lines in the spectrum of hydrogen atom in visible range, produced by transition between $n=2$ and $n=3, 4, \dots$ in the principal quantum no.
Bary:	A unit of pressure, equal to 100 Pascals.
Baryon:	Subatomic particle composed of three quarks.

Reviews

Complete guideline for publication fanatics. It is written in easy phrases rather than hard to understand. I am very happy to inform you that this is basically the finest pdf we have studied in my personal life and can be the finest pdf for at any time.
(Saul Mertz)

PHYSICS TERMINOLOGY (SPEEDY STUDY GUIDE)

Paperback. Book Condition: New. This item is printed on demand. Item doesn't include CD/DVD.
