

Decomposition and Recapture of Ammonium Bicarbonate Draw Solution

Filesize: 5.73 MB

Reviews

The ideal book i actually read. It is one of the most awesome pdf i have study. I am just happy to tell you that this is basically the best book i have study in my own life and might be he finest ebook for actually.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | A Forward Osmosis Process | A laboratory scale technology that mimics a simple distillation and condensation system was used for decomposition and recapture of an ammonium bicarbonate draw solution. To analyze the recapture performance for this specific application and the influence of system parameters, a test matrix was implemented to address the mass transfer and kinetics involved in the recapture process using 1M, 2M, and 3M ammonium bicarbonate draw solutions. Also, CHEMCAD was used to design a conceptual distillation and condensation recapture and recovery system for a 1000 gpd pilot-scale system. The UNIQUAC model and Pitzer method were used for the simulation of the NH₃-CO₂-H₂O ternary system. Effluent quality for the simulation was specified to contain less than 1% of NH₃ and CO₂. The unit cost of product water was estimated to be \$0.12/gal for only the recovery system. The results herein have practical significance to a full-scale Forward Osmosis process. A highly efficient draw solution of ammonium bicarbonate can be reconstituted; however, the current suite of experiments did not address the impact of using a reconstituted solution within the Forward Osmosis system | Format: Paperback | Language/Sprache: english | 240 gr | 220x150x9 mm | 168 pp.
