Process Ability Enhancement of false Banana Fiber

By Alhayat Getu Temesgen

GRIN Verlag. Paperback. Condition: New. 64 pages. Dimensions: 8.3in. x 5.8in. x 0.1in. Masters Thesis from the year 2012 in the subject Textile, Print, Crafting, grade: Excellent, Bahir Dar University (Institute of Technology for Textile, Garment and Fashion Design), language: English, abstract: ABSTRACT: False banana fibers (ventricosum), as well as other lignocelluloses fibers were constituted of cellulose, hemicellulose, lignin, wax and water soluble components. The abundance of this fibers combined with the ease of their availability can be used to substitute synthetic fibers that were potentially toxic. In this work, the structure, characterization of False banana fibers (FBF) modified by physico-chemical treatment was studied. One of the components of the study was to develop a process for softening of false banana fiber or yarn for the production of diversified FBF products like sack, mat or carpets of supple feel and improved texture on industrial scale. Some important physico-chemical properties of this fibers changed due to chemical (silicon softener, NaOH, Na₂CO₃, H₂O₂, MgSO₄) and bio-chemical (Aloe Vera, castor oil, cottonseed oil, fat and soap) treatment. The changes due to Physico-chemical treatment include, of weight loss, moisture content regain, tensile strength, fineness, bending and torsional rigidity of the fiber were studied on process...

This publication may be worth purchasing. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.
