Excerpt from A Stochastic Theory of the Firm The other results in Chapter 2 of [11] can be similarly generalized to the case that  $a: E \rightarrow D$ . It is noteworthy that the proof of the above proposition does not use the assumption that  $z$  is the trajectory of the difference of two Poisson processes. And hence the result remain valid as long as  $Q$  is space  $D$ . Though we consider a special case of Poisson. The results in the paper are not hard to extend to the case of compound Poisson processes. Or more general buffer system of additive processes.
