Not illustrated. 1903 Excerpt: .eccentricity of the ellipse, they will be in equilibrium for all positions of W on the curve; and if they have any other ratio they will not be in equilibrium at any point, except at the extremities of the axis, A and B. In Conic Sections the proportion involving e, given in this article, may not be given in this form. If a be the semi-major axis, and x the abscissa of the point c in reference to the centre, then the following equations are usually given, viz. the radius vector, $de, = -a ex$; the distance from the focus to the foot of the normal, $de, = e(a ex)$; the plus sign being used for the distance e d, and the minus sign for ed. These values readily give $de-e(a ex)-de a ex$ hence, the proportion given in the text. 262. Let the curve be an hyperbola, the pin being in the upper focus. Proceeding as before, we find W but in this case e exceeds unity; hence W must exceed P, while in the former case W must be less than P. 063. Suppose, in the preceding case, that the pin over which the string passes is at the centre of the hyperbola. Let a be the semi-major axis, b the semi-minor axis, the axis of x horizontal, and y vertical. The axis of the hyperbola being vertical, the equation will be $a^2y^2 - b^2x^2 = a^2W$. (1) Construct the triangle of forces cab, in which ah wiU be...
