Excerpt from Measurement of Multimode Optical Fiber Attenuation Details on the two launch conditions are given in section 2. The problems discussed here are not applicable to monomode fibers, where the optical size of the fiber is so small that only a single mode can propagate. Since the strength of intermodal coupling influences the attenuation of the fiber, the environment can affect the measured attenuation. The loss value assigned to an uncabled fiber may not be appropriate to the cabled fiber. Likewise, the loss of an uncabled fiber on a spool depends on how tightly the fiber is wrapped around the spool. For purposes of fiber specification for purposes of trade and commerce) it is important that the attenuation assigned to a fiber be of practical use. When fibers are concatenated, the attenuation of the resulting link should be predictable from the specified attenuation of individual fiber sections. That is the crux of the attenuation measurement problem. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
