WORLD SCIENTIFIC PUBLISHING, Singapore, 2015. Hardback. Condition: New. Language: English . Brand New Book. The aim and scope of this book is to review current information on human development and processes of differentiation that have benefited from breakthrough analyses in stem cell biology, elucidation of genome and gene architecture and aspects of regulation of gene expression, analysis of signaling systems and transcription factor actions. Insights into actions of specific genes and their roles in development have been gathered through studies in patients with specific birth defects, including congenital malformations, metabolic defects and functional impairments. The book is organized into three sections, the first dealing with aspects of genomics, gene structure and regulation, analysis of signaling and function of specific organelles. The second section deals with molecular aspects of development of specific organs and structures such as, bone, face, brain, heart, liver, pancreas, kidney. The last section deals with specific malformations and tumors that provide insight into regulation of growth. Environmental factors that impact growth and development are also covered.
