I found this growth composed exclusively of cancer-cells--without exception, the most perfect specimens I have ever seen. Some were circular; others lengthened out; others again of an extreme length and narrowed. A great many contained two or more, often a large number, of nucleolated nuclei--excellent examples of endogenous cell-formation. Exudation corpuscles and fat globules were also abundant. Lungs: Upper halves of both firmly consolidated by quantities of crude yellowish grey tubercles. A few small vomicae. No cancerous deposits. The microscopic characters of the tuberculous matter were well marked. Heart: Some indurations at the edge of the mitral valve and in the line of attachment of one of the segments of the aortic valve. Bicuspid and pulmonary valves normal. No hypertrophy or dilatation; muscular substance firm. Liver: Portal system congested. Contained a small earthy nodule. Kidneys: Left one of a deep venous hue, with a small cyst in its substance. Right one healthy. Spleen: Normal Intestines: Not opened much narrowed in calibre. Another fact worthy of attention is the different susceptibilities different organs have for the development of the two morbid states. Thus original cancer of the lungs is very rare, original tuberculosis of the lungs very common; original cancer of the liver is not uncommon, original tuberculosis of the liver is rare. And these facts may be multiplied for several other organs. I have long been struck, when listening to the melancholy tales of cancerous patients, how often one...
