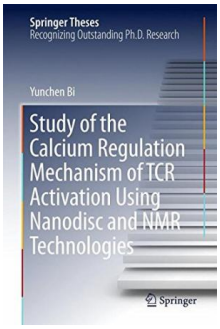
STUDY OF THE CALCIUM REGULATION MECHANISM OF TCR ACTIVATION USING NANODISC AND NMR TECHNOLOGIES



Springer-Verlag Gmbh Jul 2017, 2017. Buch. Condition: Neu. Neuware - This thesis describes the use of biophysical and biochemical methods to prove that calcium has a positive feedback effect on amplifying and sustaining CD3 phosphorylation and should enhance T-cell sensitivity to foreign antigens. The study presented shows that calcium can regulate the signal pathway in cells not only as a secondary messenger but also through direct interactions with the phospholipid bilayer. The approach used in the thesis also represents an...

Reviews

A whole new e book with a new perspective. I could comprehended almost everything using this written e ebook. I am very happy to inform you that here is the greatest ebook i have read in my very own life and may be he best publication for ever.
-- ***Dee Halvorson***

This book might be worth a read, and superior to other. Of course, it really is engage in, still an interesting and amazing literature. It is extremely difficult to leave it before concluding, once you begin to read the book.
