The Universal Force Volume 1 - Derived From A More Perfect Union of the Axiomatic and Empirical Scientific Methods This is the first volume of a set. The purpose of the set of books is to lead a reformation movement in modern science to perfect the union of the ancient Greek axiomatic method of Euclid with the empirical scientific method of Isaac Newton. The first volume derives an improved version of the electrodynamic force by using a complete set of the empirical laws of electrodynamics as the postulates for the axiomatic method. In the first volume is shown that the effects of Special Relativity are due to electrical feedback effects on finite size charge structures. Also the book shows that quantum effects such as the photoelectric effect and black body radiation are due to resonant effects in finite-size charge structures consisting of closed charge loops. The improved electrodynamic force law derived in the book contains acceleration a terms for radiation and dadt terms for radiation reaction. From this improved electrodynamic force law is derived improved versions of the force of gravity and inertia which explain many previously unexplained phenomena such as the quantization of gravity as identified by Stanley Dermotts modern version of Bodes Law and the unusual gyroscope experiments of the British engineer Eric Laithwaite. This improved electrodynamic force will be used in future volumes of this series to create new models of elementary particles, atoms, nuclei and molecules which are simpler and explain more data more accurately than previous models. A peculiar symmetry in the improved electrodynamic force law which is a combination of spherical and chiral symmetry appears in all elementary particles, atoms, nuclei, molecules,...
