

Investigation of human mitochondrial DNA abnormality in colon cancer

Filesize: 1.66 MB

Reviews

The ebook is simple in go through safer to understand. I could possibly comprehended every thing out of this composed e pdf. Its been designed in an exceptionally basic way in fact it is only soon after i finished reading this pdf by which actually altered me, modify the way i really believe.

INVESTIGATION OF HUMAN MITOCHONDRIAL DNA ABNORMALITY IN COLON CANCER

DOWNLOAD

Cuvillier Verlag Okt 2008, 2008. Taschenbuch. Condition: Neu. Neuware - The appearance of mtDNA abnormalities including deletions, duplications, insertions or combinations of them in colorectal cancer (CRC) patients was investigated in this work. Our result showed that 11 of 90 CRC patients had a 8.7kb mtDNA deletion (12.2%) while this deletion was not found in 33 healthy controls. ($P=0.035$) We conclude that the 8.7 kb deletion can be a secondary effect of the cancer process, which is not inherited. This is the first report on large scale deletions in CRC. We also analyzed the correlation between cancers and mitochondrial haplogroups. The relationship between CRC and each of 9 major mitochondrial haplogroups were examined in Iranian CRC patients. This is the first study to trace mtDNA HVS1 variants in CRC patients of the Persian population. Our data showed that patients with CRC have a significantly ($P=0.001$) higher frequency of haplogroup K (9.5%) when compared with controls (0%). The mitochondrial polymorphisms in haplogroup K might play a causative role in predisposing to CRC. Variations in the D-loop region were found in both CRC patients and healthy people but the frequency of SNPs in CRC patients was higher than in controls samples. We found 13 new polymorphisms that had not been recorded in the mitochondrial database. We also detected one T C transition at np16519 in 28 out of 40 patients (70%). In a recent study researchers reported that the T16519C variation worsen the outcome of pancreatic cancer patients, possibly because it is involved in altering cellular metabolism. Because we found this mutation frequently in our healthy controls (43%) and could not find any differentiation among our patients with respect to the alleles at this mutation, we conclude that the functional significance of this mutation needs further investigation. We also analyzed somatic mutations in mitochondrial genes encoding subunits of the respiratory complex I. Seven somatic mutations in the MT-ND1 gene were found. Six of these mutations were synonymous mutations....
