Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1876 Excerpt: .of a large number of bright comets, and concludes that they may be referred to three general types, for which the theoretical values of 1--ft are 12 (type /), 1 (type /) and 0.3 (type III), expressed in units of the Newtonian force. The value of 1--ft for the second type varies between 2.6 and 0.8. In some of the great comets there have been several conoids belonging to the same type, diverging slightly so as to broaden the extremity of the tail. The tail of type / is usually long, narrow and nearly straight. Type //is much shorter, broader and more curved. Type /// is very short and faint, and deviates widely from the direction opposite the sun. The initial velocities derived for the three types are 0.15 (/), 0.03 (//) and 0.01 (///), for which the unit of time is 58.13244 days (τ , k being the constant of solar attraction), and the unit of distance is the mean radius of the earth's orbit. As to the constitution of comets tails, Professor Bredichin offers the hypothesis, that the different conoids consist of particles whose atomic weights are inversely proportional to the repulsive forces 1--ft. Thus type / contains hydrogen, type //carbon or compounds of carbon and hydrogen, and type ///metallic vapors, such as iron, sodium, etc. Annales de Observatoire de Moscou, Vol. V, I have computed the position angle and distance of the observed points from the nucleus and reduced them to the...
