

Effects of Historical Coal Mining and Drainage from Abandoned Mines on Streamflow and Water Quality in Bear Creek, Dauphin County, Pennsylvania-March 1999-December 2002: Usgs Scientific Investigations Report 2005-5042

Filesize: 2 MB

Reviews

This type of publication is almost everything and helped me looking forward and much more. I am quite late in start reading this one, but better then never. You wont really feel monotony at whenever you want of your own time (that's what catalogs are for relating to if you ask me).

(Prof. Buddy Leuschke)

EFFECTS OF HISTORICAL COAL MINING AND DRAINAGE FROM ABANDONED MINES ON STREAMFLOW AND WATER QUALITY IN BEAR CREEK, DAUPHIN COUNTY, PENNSYLVANIA-MARCH 1999-DECEMBER 2002: USGS SCIENTIFIC INVESTIGATIONS REPORT 2005-5042

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.More than 100 years of anthracite coal mining has changed surface- and ground-water hydrology and contaminated streams draining the Southern Anthracite Coal Field in east-central Pennsylvania. Bear Creek drains the western prong of the Southern Anthracite Coal Field and is affected by metals in drainage from abandoned mines and streamwater losses. Total Maximum Daily Loads (TMDL) developed for dissolved iron of about 5 lb/d (pounds per day) commonly are exceeded in the reach downstream of mine discharges. Restoration of Bear Creek using aerobic ponds to passively remove iron in abandoned mine drainage is under consideration (2004) by the Dauphin County Conservation District. This report, prepared in cooperation with the Dauphin County Conservation District, evaluates chemical and hydrologic data collected in Bear Creek and its receiving waters prior to implementation of mine-drainage treatment. The data collected represent the type of baseline information needed for documentation of water-quality changes following passive treatment of mine drainage in Pennsylvania and in other similar hydrogeologic settings.
