Hydrologic balance is closely related to public health and safety especially in regard to potable water supplies, irrigation and stock feeding, and recreational facilities. This guideline provides guidance on how to restore the hydrologic balance through various reclamation activities. Beneficial impacts to public health and safety that will result by restoring hydrologic balances are numerous and may include enhancement of water quality and quantity, decreased erosion and downstream sedimentation, decrease in flood potentials, increased watershed storage capacity, and improvement in groundwater supply and quality. Indirect short-term adverse impacts which could result from reclamation activities are fugitive dust problems, water channelization and impoundment, and water quality degradations. (n) Public health and safety This guideline generally covers the spectrum of public health and safety problems caused by abandoned mine lands. Mitigation of public health and safety hazards is for the most part, an emergency and first priority project. Examples of public health and...
