Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Turfgrass Evaluation of Prairie Grasses for the Low- Maintenance Urban Landscape | The high environmental costs of maintaining golf courses, home lawns and public areas has created a tremendous interest in developing low-maintenance turfgrasses. Most research, however, has concentrated on the traditional turfgrasses such as Kentucky bluegrass (*Poa pratensis* L.) and fescue species (*Festuca* spp.). The grasses native to western Canada and the north central USA have not been well researched, but they may provide the ultimate low maintenance turfgrasses for the prairie region. Prairie grasses have the advantage of evolving under the environmental extremes of North America and should be perfect candidates for low maintenance turf. This book explores the suitability of prairie grasses not only for low-maintenance turf, but also its suitability in saline and drought prone turf areas. It will also investigate the environmental benefits and historical evolution of using native plants in North American urban design. This book should be especially useful for turfgrass researchers, urban planners or anyone else who may be interested in utilizing prairie grasses in the urban landscape. | Format: Paperback | Language/Sprache: english | 104 pp.
