May 13th, 1896 An altitude of 5,000 feet does not deplete the wind currents of their moisture, so that the valleys which are located between the mountain ranges are everywhere well watered, both from the Atlantic Ocean and from the Great Lakes. There is, therefore, no region of the Atlantic seaboard which is deficient in moisture, and there is on the contrary a marked humidity. All this vast territory, including not only the Atlantic Coast, but also the Mississippi Valley where the conditions are virtually the same, is subject to great alterations in temperature. Great heat in summer and excessive cold in winter are the marked characteristics, with sudden changes in temperature and markedly humid atmosphere, in which the sensible extremes are felt with a discomfort which is unknown in the arid regions. On the Pacific Coast are entirely different, gigantic mountain system ranges between the Mississippi Valley and the ocean. Like the corresponding system on the Atlantic Coast, its general trend...
