Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903 Excerpt: .to be 1. Thus c is the same as 1 c because c multiplied by 1 is c. 12. An Exponent is a figure or letter written at the right and a little above a quantity to indicate the number of times the quantity is to be taken as a factor. For example, in c^4 the shows that c is to be taken 4 times as a factor, c is equivalent to $c \times c \times c \times c$. 13. When no exponent is written, the first power is understood; 6 is the same as 6^1 . b^2 is b to the second power or 6 square; it is equal to b b. b^3 is b to the third power or b cube; it is equal to bbb. b^4 is b to the fourth power and is equal to bbb b. The distinction between coefficient and exponent must be thoroughly understood. In the case of the coefficient, the coefficient shows how many times the quantity is taken to make a given sum. The exponent indicates how many times the quantity is to be taken to make a given product. Thus, $4a = a + a + a + a$. $a^4 = a \times a \times a \times a$. 14. Symbols of Relation are the signs which show equality and inequality. The sign = is read equals. The expression $a = b$ means that the quantity represented by a is equal to the quantity represented by b. When two quantities are connected by the \neq sign, the expression is called an equation. The sign $>$ is read is greater than...
