RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2009 OCLC Number: (OCoLC)439073262 Subject: Photovoltaic cells -- Research. Excerpt: . . . The original intent of this work was to investigate in greater detail the metastable hydrogen doublet that accompanies the SWE using a sample, which has a large defect density in the light-soaked state. In this case, the as-grown sample would provide a benchmark line shape for comparison with the light soaked sample. Unfortunately, because of the much smaller density of the metastable doublet sites, we have to date not succeeded in making this comparison. The major complicating fact is the occurrence in the sample of a doublet at much higher densities, and therefore comparisons of the as-grown and light-soaked samples ( not shown in this quarterly status report ) show no difference in the line shapes. The stable hydrogen doublet site persists in both samples. Therefore, we have concentrated on identifying the hydrogen-hydrogen ( H-H ) arrangement to determine the H-H separation in this site. To characterize further this different H-H site, we have investigated the line shape as a function of the temperature,...

### Reviews

*I actually started off reading this ebook. It can be full of knowledge and wisdom I discovered this pdf from my i and dad suggested this pdf to understand.*  
-- **Marilyne Haag**

*A really wonderful ebook with perfect and lucid answers. It is rally interesting throgh looking at period of time. Once you begin to read the book, it is extremely difficult to leave it before concluding.*  
-- **Gustave Moore**
