Doctoral Thesis Dissertation from the year 2008 in the subject Physics - Astronomy, grade: -, University of Kerala (Space Physics Laboratory, Vikram Sarabhai Space Centre - Indian Space Research Organization, Dept. of Space, Govt. of India), course: Physics - Atmospheric Sciences, language: English, abstract: Troposphere is the lowest layer of the atmosphere, where the temperature decreases with increasing altitude. The prime objective of this study is the characterization of various atmospheric processes ranging from a few kilometers to a few hundreds of kilometers taking place within this layer over the southern part of Indian sub-continent with the aid of numerical atmospheric models and observational data. With a view to broadening our understanding on some of the interesting atmospheric events such as SeaLand Breeze Circulation (SLBC), Mountain Waves, and Thunderstorms, hitherto not attempted very much in an analytical and quantitative sense by many researchers the world over, the contents of this thesis titled Studies on Lower Atmospheric Processes over South India using Numerical Atmospheric Models and Experiments are organized into seven chapters.
