Elsevier Science Publishing Co Inc. Hardback. Book Condition: new. BRAND NEW, Statistical Methods in the Atmospheric Sciences (3rd Revised edition), Daniel S. Wilks, Praise for the First Edition: "I recommend this book, without hesitation, as either a reference or course text. Wilks' excellent book provides a thorough base in applied statistical methods for atmospheric sciences". ("BAMS" ("Bulletin of the American Meteorological Society")). Fundamentally, statistics is concerned with managing data and making inferences and forecasts in the face of uncertainty. It should not be surprising, therefore, that statistical methods have a key role to play in the atmospheric sciences. It is the uncertainty in atmospheric behavior that continues to move research forward and drive innovations in atmospheric modeling and prediction. This revised and expanded text explains the latest statistical methods that are being used to describe, analyze, test and forecast atmospheric data. It features numerous worked examples, illustrations, equations, and exercises with separate solutions. "Statistical Methods in the Atmospheric Sciences, Second Edition" will help advanced students and professionals understand and communicate what their data sets have to say, and make sense of the scientific literature in meteorology, climatology, and related disciplines. It offers accessible presentation and explanation of techniques for atmospheric data summarization, analysis, testing and forecasting. Many worked examples, and end-of-chapter exercises, with answers are provided.
