It also presents six sides or faces, all of which are parallelograms, though not necessarily squares. It is a rectangular or an oblique parallelepiped, accordingly as these faces are rectangular or oblique. The opposite faces of every parallelepiped are parallel planes: that is to say, planes, which however far extended, never meet. 3. A Prism is a solid, whose side-faces, be they few or many, are all parallelograms, and the ends parallel and rectilineal plane figures, in every respect equal. If the parallelograms which form the sides are rectangles, the prism is a rectangular or upright prism; otherwise it is an oblique prism. It is plain, that a parallelepiped is but a particular case of the prism. Prism3 are distinguished from one another by the form of the end or base. If the base be a triangle, it is...
