Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Design of Ultra Low Power Compressors | I present a new design for a 1-bit full adder featuring hybrid-CMOS design style. My approach achieves low-energy operations in 90nm technology. Hybrid-CMOS design style makes use of various CMOS logic style circuits to build new ull adders with desired specifcations. The new SERF- full adder (FA) circuit optimized for ultra low power operation is based on modified XOR gates with clock gating to minimize the power consumption. And also generales full-swing outputs simultaneously. The new full-adder circuit successfuUy operates at low voltages with excellent signal integrity. The new adder displayed better power and delay metrics as compared to the standard ull adders. To eval<sup>o</sup>ate the performance of the new full adder in a real circuit, we realized 4-2,5-2,5-3,7-2,11-2,15-4,31-5 compressors which are basically used in multiplier modules of DSP filters. Simulated results using 90nm standarad CMOS technology are provided. The simulation results show a 5% - 20% reduction in power and delay for frequency 50MHz and supply voltages range of 1.1 v. | Format: Paperback | Language/Sprache: english | 80 pp.
