*This pdf may be really worth a read, and superior to other. It generally does not price too much. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

The split-like lesion (L in the figure) is located between the dorsal corner of the thalamus and the Sylvian sulcus, the level of the injury approximately corresponding with the planes of figures 33, 34 and 52 of both foregoing experiments. Interrupted by the injury, a dense bundle of ascending thalamo-cortical fibers (sr) degenerated completely, while other bundles of the thalamo-cortical radiation remained normal. The bundle which was thus caused to degenerate, is identical with the posterior or the caudal segment or fan of the thalamo-cortical radiation originating in the caudal thalamic segment and supplying the caudal half of the somato-sensory cortex behind the central sulcus (shaded areas in fig. 3). Bundles of the radiation remaining normal are those springing from the oral or Fig. 3, Experiment III.
