Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . projections by development. It is an unfortunate term; there is no such thing as a projection by development, the surface is not developable, and the application of the expression to certain conical and cylindrical projections is misleading, and it is equally misleading if it is intended to denote a geometrical derivation. Projections Of A Hemisphere. To illustrate some of the foregoing remarks it may be interesting to consider the number of ways in which a hemisphere can be represented. There are a dozen projections to choose from. First, four equal-area projections, viz.: --Cylindrical (fig. 1), Sinusoidal (fig. 2), Elliptical (fig. 3), Zenithal. Next, two orthomorphic projections, Perspective orthomorphic (stereographic) and Cylindrical orthomorphic (Mercator s); then two by balance of errors, the Zenithal (Airy s) and the Perspective (Clarke s); then the orthographic, in which one system of lines is true to scale; then the simple and the rectangular, polyconic (fig. 4); and we end the list with conventional projections of which the globular (fig. 5) is the best known. For atlases it is safe to advise the adoption of Clarke s minimum error perspective projection and Lambert s zenithal equal-area projection. Mercator s Projection, otherwise the cylindrical orthomorphic. It is a question whether this projection should be retained in atlases intended for popular use, for use by those in fact who do not, as a rule, understand its properties and defects. Of course its great defect is the exaggeration of scale towards the poles. The...
