Excerpt from Quality Assurance/Quality Control Guidelines for San Joaquin Valley Drainage Program Investigations: May, 1987 San Joaquin Valley Drainage Program is designed to manage salt deposition and trace element contamination in the valley drainage system and in the west side of the San Joaquin Valley. The drainage system includes the San Joaquin River, San Luis Drain, canals, Kesterson Reservoir and San Francisco Bay Delta. The goals of this program are to protect public health, to maintain drainage water discharge in conformance with effluent discharge standards through proper treatment and disposal, to preserve agricultural land, and to maintain the natural support system for fish and wildlife in the valley wetlands. The success of the program depends on reliable and accurate data in key areas; i.e., salt and trace metals and selenium measurements in drainage water, soil, air and biota.
