Key role of galectins in  
corneal hem-, lymph-  
angiogenesis and fibrosis

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Corneal neovascularization (CNV) is a vision-threatening condition affecting millions of individuals each year in the United States alone. It is associated with a wide range of ocular disorders including infections, inflammatory disorders of the ocular surface and trauma. The complications of CNV include corneal scarring/fibrosis, edema, and increased risk of graft rejection. The frequency of rejection of corneal grafts placed in vascularized high-risk host beds can reach as high as 90%. In...
