Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Mechanical Engineering Materials: Their Properties and Treatment in Construction The strength of cast iron, as demonstrated by the mechanical testing machine, will vary of course, with the nature of the metal, but, as a general average result, the ultimate or breaking tensile strength of good commercial cast iron may be taken at 7 tons per square inch, and the ultimate crushing or compressive strength at 40 tons per square inch. The working load will depend as to whether the material will have to resist a steady or varying load in the former case the working load may be that of the breaking load, but when subjected to shocks or impact a factor of safety of 10 should be employed. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
