RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 94 pages. Original publisher: Cincinnati, Ohio : National Risk Management Research Laboratory, Office of Research and Development, U. S. Environmental Protection Agency, 2006 OCLC Number: (OCoLC)551147657 Subject: Bioreactors. Excerpt: . . . 2-Here ethanol is the carbon source and SO is the terminal Compost-Free Bioreactor Operation: Operated in gravity 4 electron acceptor in the electron transport chain of sulfate-flow mode (Figure 1-2), influent ARD passes through a flow reducing bacteria. Reaction No. 1 causes an increase in control weir at flow rates ranging from 25 to 47 liters per alkalinity and a rise in pH, while reaction No. 2 results in the minute (L min), where sodium hydroxide is added to adjust generation of acetate rather than complete oxidation to the pH to approximately 4 to maintain a favorable-then reacts with a variety of divalent metals carbonate. HS environment for sulfate-reducing bacteria and ethanol is added 2 (M), resulting in a metal sulfide (MS) precipitate. to provide a carbon source for reducing equivalents for the sulfate-reducing bacteria. Precipitates that are formed at this The reduction of sulfate to sulfide requires...
