This information was used to identify whether correlations exist between these three variables for South African youth. A literature study was conducted and the following hypotheses were developed for study: I. Adolescent females report higher (more severe) levels of body image dissatisfaction than males. II. Depression rates among South African adolescents have a female-to-male ratio of 2:1. III. Depression prevalence rates among South African adolescents are lower than their American counterparts. IV. Adolescent females display higher levels of anxiety than their male counterparts. V. A significant positive correlation exists between levels of body image dissatisfaction and levels of depression. VI. A significant positive correlation exists between levels of body image dissatisfaction and feelings of anxiety. VII. There...
