To get **The Theory of Drying and Its Application to the New Humidity-Regulated and Recirculating Dry Kilns (Classic Reprint)** eBook, please follow the button beneath and download the ebook or get access to additional information which are highly relevant to THE THEORY OF DRYING AND ITS APPLICATION TO THE NEW HUMIDITY-REGULATED AND RECIRCULATING DRY KILNS (CLASSIC REPRINT) book.

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from *The Theory of Drying and Its Application to the New Humidity-Regulated and Recirculating Dry Kilns* The qualification in regard to air is necessary, for the sake of exactness, for the following reason: In any given space the total actual pressure is made up of the combined pressures of all the gases present. If the total pressure ( vacuum ) is 2 inches, and there is no air present, it is all produced by the water vapor (which saturates the space at 101 F.); but if some air is present and the total pressure is still maintained at 2 inches, then there must be less vapor present, since the air is producing part of the pressure and the space is no longer saturated at the given temperature. Consequently further evaporation may occur, with a corresponding lowering of the temperature of the water, until a balance is again reached. Without further explanation it is easy to see that but little water can be evaporated by a vacuum alone without addition of heat and that the prevalent idea that a vacuum can of itself produce evaporation is a fallacy. If heat be supplied to the water, however, either by conduction or radiation, evaporation will take place in direct proportion to the amount of heat supplied, so long as the pressure is kept down by the pump. At 30 inches of mercury pressure (one atmosphere) the space becomes saturated with vapor and equilibrium is established at 212 F.If heat be now supplied to the water, however, evaporation will take place in proportion to the amount of heat supplied, so long as the pressure remains that of one atmosphere, just...
