Excerpt: . . . so as to expose the interior of the joint. The knife may also be carried round the lateral side of the lateral calcaneo-navicular ligament. A much better view of this ligament is thus obtained, although this dissection entails the division of the dorsal cubo-navicular ligament. The convex anterior articular surface of the navicular fits into a transversely concave socket, which is formed for it by the posterior surfaces of the three cuneiform bones, and often by a small facet on the medial surface of the cuboid as well. The articular surface of the navicular is divided by prominent ridges into areas or facets corresponding with the different parts of the socket in which it lies. The synovial stratum, which lines this joint, is prolonged forwards into the intercuneiform joints. Cubo-navicular and Cubo-cuneiform Articulations. --It has been noted that the anterior pillar of the longitudinal...
