MICROBIAL ALDOLASES AS C-C BONDING ENZYMES

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Investigation of structural-functional characteristics and application for stereoselective reactions | Carbon-carbon bonding enzymes can be attractive alternatives to standard chemical methods by allowing chiral control, taking advantage of mild reaction conditions and minimizing the use of protecting groups in reactions. Fructose-6-phosphate aldolase (FSA) from *Escherichia coli* catalyses reversibly the cleavage of D-fructose-6-phosphate into dihydroxyacetone (DHA) and D-glyceraldehyde-3-phosphate (GAP). In addition, the enzyme creates new building blocks with 3S, 4R configuration by use...

Reviews

It in a single of the best pdf. Better then never, though i am quite late in start reading this one. I realized this ebook from my dad and i encouraged this publication to understand.

-- **Major Thompson**

This pdf is indeed gripping and exciting. it was writtern quite completely and valuable. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Kurtis Parisian**

This book is definitely not effortless to start on looking at but really exciting to see. It really is simplistic but surprises from the 50 % from the pdf. I am just effortlessly can get a delight of looking at a published book.
