EVALUATION OF GROUND WATER RESOURCES, VOL. 5: SONOMA COUNTY (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Evaluation of Ground Water Resources, Vol. 5: Sonoma County Ground water plays an important role in Sonoma County. As the population of this North Bay county has increased over the last 30 years, the use of ground water has increased. Over 15,000 wells are known to exist in the county. These wells are used for domestic and agricultural purposes in rural areas and for municipal and industrial purposes in urban areas. The Sonoma County Water Agency requested the California Department of Water Resources (DWR) to undertake a cooperative study to estimate the volume of ground water in storage and the recharge potential in the Santa Rosa Plain, Petaluma Valley, Sonoma Valley, and Alexander Valley and Healdsburg area. The study examined alternative ways the ground water resources of the county may be used conjunctively with the Russian River and other surface water sources. The present study was designed to augment an earlier countywide investigation of geology and hydrology conducted jointly by the Sonoma County Planning Department and DWR. Results of the earlier investigation were published as DWR Bulletin 118-4, Volume 1 (Ford, 1975). The results of this recent study are presented in four volumes. This report is Volume 5 and describes ground water conditions in Alexander Valley and the Healdsburg area. Volume 2 deals with the Santa Rosa Plain, Volume 3 with the Petaluma Valley, and Volume 4 with the Sonoma Valley. This report on Alexander Valley and the Healdsburg area includes evaluation of: geologic and hydrologic characteristics of the ground water basins; the volume of fresh-ground water in the basins; the interconnection of ground water and surface water; and the potential for artificial recharge of ground water. About the...
