Clinical Publishing, an imprint of Atlas Medical Publishing Ltd, United Kingdom, 2010. Hardback. Condition: New. Language: English . Brand New Book. In the past three decades, the diagnosis and treatment of stroke has changed at a phenomenal rate since the first use of CT scans and early studies using thrombolytic agents. In the last decade, the stroke specialist has seen the introduction of new therapies versus carotid endarterectomy; mechanical embolectomy and other catheter-delivered agents and devices; novel thrombolytic agents; drugs to limit hematoma expansion; antithrombotic agents for secondary stroke prevention and other neuroprotective strategies. Advanced techniques such as the treatment of aneurysms by neurosurgical clipping versus endovascular coiling, and neurosurgery for intracerebral hemorrhage and the malignant MCA stroke syndrome have been studied, offering a promising look into the future. It must not be forgotten that this has happened against the backdrop of ever increasing sophistication in the field of CT scanning and MR neuroimaging, which helps direct better patient selection for specific therapies and may substantially increase the chance of a successful therapeutic outcome. These advances in treatment therapies has led to a paradigm shift in the way stroke victims are diagnosed and cared for. This exciting new guide to vascular neurology offers a richly illustrated and, above all, practical guide to assist in the complex management and clinical decision-making involved in this fast-moving field. The authors have assembled a comprehensive collection of original visual material which will be a valuable reference to the specialist and trainee clinician alike. This is a comprehensive visual guide to diagnosis of stroke. It offers a collection of high quality images assembled by expert US team. It assists pattern recognition to establish correct diagnosis.
